

Gas Pressure Regulator

F-P Serie DN25 - DN150

Main Features

Direct-acting F-P Serie Gas Pressure Regulators According to 2014/68/EU Directive, EN334 and EN 14382

- Balanced valve
- Rugged construction for durability
- Wide pressure regulation range
- Full seal at zero flow
- Easy maintenance
- Optional minimum and/or maximum pressure slam-shut device
- Optional silencer internal and/or external
- With or Without SSV
- With electric position indicator SSV closed by an inductive proximity switch
- Combined monitoring system
- Bypass system for to activate ssv easily

Technical Features

Maximum allowable pressure –PS	25 bar
Inlet pressure range –bPu	0.2 – 25 bar
Outlet pressure range –Wd	15 – 16.000 mbar
Allowable temperature –TS ⁽¹⁾	-20 °C to +60 °C
Inlet gas temperature	-20 °C to +60 °C
Accuracy class –AC	Wd 15 – 4000 mbar up to AC 2.5 Wd 4 – 16 bar up to AC 1
Lock-up pressure class –SG	Wd 15 – 4000 mbar up to SG 5 Wd 4 – 16 bar up to SG 2.5
Nominal size –DN	DN25 1" DN40 1 1/2" DN50 2" DN65 2 1/2" DN80 3" DN100 4" DN150 6"
Connections ⁽³⁾	Class 150 RF according to ASME B16.5 and

⁽¹⁾ Low temperature version -40°C: available on request

⁽³⁾ On request for other connection class

Metarials

Body ⁽¹⁾	EN-GJS 500-7 Ø280 mm Aluminium cast alloys Ø380 mm Cast steel Ø520 mm Carbon Steel
Main Actuator ⁽²⁾	DN up to 2" Brass DN up to 2 1/2" to 6" Stainless Steel
Seat ⁽²⁾	Stainless steel and brass
Internal Parts ⁽²⁾	NBR+canvas (powered by hot operation process)
Seals	Synthetic rubber with fabric reinforcement
Diaphragm	

⁽¹⁾ A 216 WCB: available on request

⁽²⁾ Other materials available on request

Gas Pressure Regulator, F-P Serie

Standards and certificates

Applied directives:

Pressure Equipment Directive –PED

(EU) EU/2014/68

Compliance with the regulations of the applied directives is verified by the adherence to the following standards / regulations:

- Gas pressure regulators for inlet pressure up to 100 bar EN 334:2019
- Gas safety shut-off devices for inlet pressures 100 bar EN 14382:2019
- EU Desing Examination Certificate 2195-PED-20081-T

- UkrSepro Tecnical Regulations for Pressure Equipment UA.TR.012C.0368

The relevant valid edition of the standards can be found in the declaration of conformity!

Use

General Gases :

Natural gas, town gas, propane, butane, air, nitrogen or all non-corrosive gases

Suitable for use with previously filtered gaseous fluids, it is mainly used for medium and low pressure natural gas distribution networks. Biogas resistant up to 0.1% H₂S dry for standard version.

Hydrogen Ready :

Suitability of natural gas-hydrogen mixtures or pure hydrogen.

When using the F-P Serie, a manufacturer's declaration and notified body reports can be provided on request.

Biogas or Biomethane Version :

Suitable for biogases and recycling gases

– up to maximum 1% by volume H₂S, dry

– up to maximum 1% by volume NH₃,

dry No non-ferrous metals (except in very small quantities found in the plastic components)

Biogas version of F-P Serie are also designed for slightly aggressive, dry gases.

Gases according such as biogases, landfill gases, sewage gases, other recycled gases, process gases, and air. The chemical composition and aggressiveness of each biogas or recycled gas is different, not constant, and dependent on several factors.

The aggressiveness of the gas notably increases:

- as the hydrogen sulfide content H₂S increases

- with the moisture content of the gas, condensation is not permitted inside the regulator

In consultation with Gastech, users must decide whether the materials used for the F-P Serie are suitable for the intended types of recycling gas. These gases can vary in terms of both their composition and the respective concentration of the components.

As a result, it is not possible to make any warranties or definitive statements regarding service life. An assessment should be carried out to determine the suitability of the gas used.

For safety reasons, we strongly recommend

- the installation of a safety relief Valve and SSV device

- a visual inspection of the F-P Serie regulator at intervals of 3 to 6 months

- Function and leakage tests

Gas Pressure Regulator, F-P Serie

Pre Pilot - Pilot

Type	GT Serie	
Allowable temperature –TS	-20 °C to +60 °C	
Set Range	GT239A 10 -1000 mbar	GT238A 0.3 – 16 bar

Pilot Control System

GTxxxA	Manual Setting
GTxxxB	Cannot be adjusted, only factory settings
GTxxxC	Analog Signal Control, 4-20mA or 0-10V
GTxxxD	Pneumatic Control
GTxxxE	Flow Control with Orifice Plate

Gas Pressure Regulator, F-P Serie

Slum Shut Valve

The F-P Serie of regulators can be fitted with safety shut-off valve for overpressure (OPSO) or combined under-and-over pressure (UPSO/OPSO) protection. Shutoff gas flow when the outlet pressure of the regulator increases or/and decreases. The Slum shut valve trip pressure can easily be adjusted independently of the regulator set point. Built internal bypass, for balancing pressure before relatching the safety shut-off valve, is operated by pulling the valve stem. Possibility of application of devices for remote signal and remote control.

Gas Pressure Regulator, F-P Serie

Monitor Unit

The Monitor or emergency regulator is used as a safety device in gas pressure reduction systems. The purpose of this device is to protect the system against possible overpressure, while keeping the reduction line in service. To perform a periodic test on a monitoring regulator, increase the outlet set pressure of the working regulator and watch the outlet pressure to determine if the monitoring regulator takes over at the appropriate outlet pressure.

Monitor regulator is generally installed upstream of the active regulator. Although the function of the monitor regulator is different, the two regulators are virtually identical from the point of view of their mechanical components. Flow coefficients of the regulator puls line monitor system are about 15% lower than those of the active regulator alone.

In order for the standard regulator to be a monitor regulator, it is necessary to add a few mechanical parts. This attachment is directly integrated into the body of the monitor regulator. Figure below is focused on the monitor unit

Gas Pressure Regulator, F-P Serie

Silencer –INT

This silencer is fitted on the regulator orifice and is highly efficient up to a theoretical speed of 80 m/s calculated at the outlet flange.

Type int silencer multi-path noise abatement device is incorporated into the regulator on the seat area. It consists of plated Stainless steel metals containing no sound deadening materials. Depending on flows and pressure drop, the silencer can reduce noise levels as much as 15 dB (A) with an approximate 3% capacity reduction.

Gas Pressure Regulator, F-P Serie

Flow Calculations

For a 0.6 specific gravity gas, sizing of regulators is usually made on the basis of Cg valve and KG flow rate coefficients. Flow rates at the fully open position and the various operating conditions are related by the following formula

Sub-critical flow behaviour (Pu -Pd) ≤ 0.5 Pu

$$Q = 0,52 \times Cg \times Pu \times \sin(K1 \times \sqrt{\frac{Pu - Pd}{Pd}})$$

$$Q = KG \times \sqrt{Pd \times (Pu - Pd)}$$

Critical flow behaviour (Pu -Pd) > 0.5 Pu

$$Q = 0,52 \times Cg \times Pu \quad Q = \frac{KG}{2} \times Pu$$

Acronyms

Q	volumetric flow rate in (m3 /h)
Pu	absolute inlet pressure in (bar)
Pd	absolute outlet pressure in (bar)

Flow rate coefficient

Size	25 1"	40 1 1/2"	50 2"	50H 2"H	65 2 1/2"	80 3"	100 4"	150 6"
Cg	540	984	1525	2200	3320	4153	7990	16700
KG	567	1034	1602	2288	3452	4320	8395	17368

- SSV designs are full bore. SSV units does not reduce regulator capacity.
- The capacities of regulators working with the active monitor system are reduced by up to 15%
- The silencer can reduce noise levels as much as 15 dB (A) with an approximate 3% capacity reduction.

Select the diameter of the regulator with Cg higher than calculated value .
 After finding the DN of the regulator, check that gas speed on the seat does not exceed 100 m/sec, using the following formula:

$$V = 345.92 \times \frac{Q}{DN^2} \times \frac{1 - 0.002 \times Pd}{1 + Pd}$$

V	Velocity (m/s)
345.92	Numerical constant
Q	Flow rate under standard conditions (Stm3/h)
DN	Regulator nominal diameter (mm)
Pd	absolute outlet pressure in (bar)

Correction factor for non-natural gas applications

The flow rates are indicated for a 0.6 specific gravity gas. To determine the volumetric flow rate for gases other than natural gas, multiply or calculate the values in the capacity tables using the sizing equations with a correction factor. The table below lists correction factors for some common gases:

Gas Type	Density ratio to air	Conversion factor
Air	1.00	0.77
Butane	2.00	0.55
Propane	1.52	0,63
Propane+Air Mix	1.2	0,71
Hydrogen	0.07	2.94
Nitrogen	0.97	0.79
Carbondioxide	1.52	0.63

Use the following formula to calculate the correction factor for gases not listed above. In the formula, d is the specific gravity of the gas.

$$\text{Conversion factor} = \sqrt{\frac{0.6}{d}}$$

Stm3 /h	/reference conditions 15 °C, 1 barg
Stm3 /h x 0.94795 = Nm3 /h	Nm3 /h reference conditions 0 °C, 1 barg
